

## STR Authentication Report For Cell Line

O) UBIGENE

1. Cell Name: K562

2. Test Method: DNA was extracted using the genome extraction kit (Axygen), amplified

using a 21- STR amplification protocol, the STR loci and gender gene Amelogenin were

Note: The above figure shows the comparison results of nine genotype loci for detecting cells and cells from the cell bank.

4. Conclusion: The STR results of K-562 cells are consistent with the genotypes of K-562 cell lines in DSMZ database, the cell ID corresponded to CCL-243, and the STR results **completely matched**. In the test, **Multi allele was found** in this cell line.
