STR Authentication Report For Cell Line

(B) UBIGENE

EU Toll free: 800 3272 9252

1. Cell Name: S180

- 2. Test Method: DNA was extracted using the genome extraction kit (Axygen), amplified using a 21-STR amplification protocol, the STR loci and gender gene Amelogenin were detected on the ABI 3730XL Genetic Analyzer.
- 3. Sample gene genotype analysis result:

	Genoty	ype analysis	results of ST	R and Amel	ogenin loci	in cells

Note: The cell lines were compared with the STR data of cell lines from ATCC, DSMZ, JCRB and RIKEN databases, the cell lines not included in the above cell banks could not be matched. D4S2408 in the following sites is a human site, which is used to detect whether the cell is contaminated by human sources.

4. Conclusion: The STR results of <u>\$180</u> cells are consistent with the genotypes of cell lines in <u>ATCC</u> database, the cell ID corresponded to , and the STR results <u>basically matched</u>. In the test, **None** in this cell line.
